Clinicient
708 SW 3rd Ave Suite 400
Portland, OR 97204

Dear Hiring Manager,

I'm a web developer and recent graduate of Epicodus (PHP) who is interested in the position as Junior QA Engineer. I would like to work at Clinicient because I want to contribute to Clinicient's vision; improve 20 million lives by 2025. As part of the Epicodus curriculum I had to complete a one-month internship which I did with CloudEngage, a Portland startup that specializes in web and mobile website personalization, but thanks to a combination of luck and hard work my internship was extended by another three months.

During my time at the internship, one of the tasks I enjoyed was finding and fixing bugs. Manual testing was a large part of my position with CloudEngage, including identifying bugs diagnosing their causes and prioritizing fixes.
Also, while at Epicodus (coding school), I studied Test-driven development and unit testing, primarily with PHPUnit.

I believe that with my programming skills, my previous work experience as well as my ability to pick up new tools quickly, I will be able to contribute meaningful work to your team. If you are interested in seeing any of my previous work, please check my [GitHub repositories](). Thank you for your consideration, and I look forward to speaking more with you soon.
